

Proposed Stock Assessment Schedule for Gulf of Mexico Stocks

Assumptions and Notes:

- Data poor stock assessment would include red drum plus a number of the stocks in the lower table. It would be beneficial to rank those in order of importance from a management perspective (note they are in no particular order below).
- A final decision on whether the Effort Calibration Updates will be conducted in 2016 or 2017 has not been made. This assumes those updates will be conducted in 2017
- The Committee asked if a red snapper update could be added in 2016. This will not be possible.
